

Unique UAV simulation system was installed in the Department of Mechatronics, developed in Threod Systems.

[\(http://www.threod.com/\)](http://www.threod.com/)

This simulator brings the development of unmanned air vehicle hardware to a new level as well as allows to work with high level unmanned air vehicle control and mission planning, along with software development. It also makes possible to make trainings for the deployment of this type of unmanned systems in a completely new level.
